

AUTOMATED RECONCILIATION OF DIRECTED RETRY LISTS

Abstract of the Disclosure

5

10 A reconciliation system automatically updates cell face transfer data in one form to match cell face transfer data in another form. The system includes an automatic read and comparison module for reading cell face transfer data from one form and automatically comparing the cell face transfer data to the data in another form. An automatic modification module automatically changes cell face transfer data entries in one form to match data in entries of another form.
